

Ultrasonic Monitor

Centeron Wireless Tank Monitoring System

Centeron monitors accurately measure tank fluid level and send information to Centeron controllers via robust wireless data links. The Centeron Ultrasonic Monitor is compact and quick to install. Its noncontact technology is suitable for a large variety of fluid applications.

- Completely wireless
- High accuracy
- Noncontact measurement
- Easy to install
- No calibration
- Low maintenance
- Eliminates costly electrical wiring

Specifications:

- Measurement range: 12 feet
- Accuracy: +/- 0.5%
- Temperature range: -40C to +80C
- UL 50, Type 3 environmentally sealed enclosure
- 5-year battery life with 4 hour transmit interval
- Low battery indication
- Radio range: 1 mile line of sight, 500 feet obstructed
- Radio complies with FCC Part 15
- ETL/cETL listed: Intrinsically safe for use in Class I, Division 1, Group D hazardous locations

The Centeron System

We start with an easy to install monitor. It's wireless, so no special know-how or tools are needed. It's powerful, too. Our DSSS radio technology is far superior to the narrow bandwidth radios found in other wireless systems. That means you receive your data even in the harshest environments.

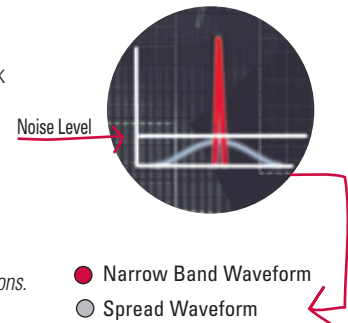

The monitor sends the tank level data to the controller. The

controller collects the data then sends it to the Centeron Data Center. From there, you can retrieve your info anytime, wherever you are.

Just think about what that information can mean to your business. An up-to-date, accurate account of tank level allows you to deliver your product when it needs to be delivered. Centeron puts you in control so you can manage your business better.

Call 1-865-981-3118 and speak directly to a Robertshaw applications engineer.

Exceptional DSSS radio technology is superior to narrow band systems, resulting in more reliable communications. So advanced, it's already the recipient of 12 patents, with additional pending.
