**ROBERTSHAW INTRODUCES NEW CENTERON TANK CONSOLE UNIT**

**MARYVILLE, TN – October 2004** – Robertshaw Industrial Products is pleased to announce the newest addition to the Centeron product line, the Tank Console. The Tank Console lets users view accurate, up to date tank level data for up to ten storage tanks easily and conveniently from one location. Since it's wireless, no electrical wiring is required between the Tank Console and tank monitors. Installation is quick, easy, and inexpensive. Its seven digit, backlit, LED display accommodates the largest storage tanks and reports the amount of product on hand or ullage in gallons, liters, imperial gallons, inches, and centimeters. Tank identification and product name can also be customized and displayed for each tank.

“The Centeron Tank Console and tank monitors make up a very cost effective tank gauging system. The equipment offers extremely competitive pricing when compared with hard-wired systems because costly electrical wiring is not needed,” stated David Cahill, Director of Centeron Products. The installation savings realized with the Centeron Wireless Monitoring System make it far and away the best value. And it's easy to expand the system to add remote tank monitoring when needed.”

The Tank Console has a simple control panel with the LED display and two tank selection buttons. The tank selection buttons enable the user to scroll through tank level

information for up to ten tanks from one location within seconds. Tank setup information is entered on a PC then downloaded through the display's integrated serial port. Setup information is safe, secure and tamper proof.

### **Just the Facts**

The Tank Console works with all the standard Centeron tank monitors. It is UL certified and is housed in a NEMA 4X enclosure for outside operation.

### **About Centeron**

*The Centeron Wireless Tank Monitoring System is designed to help companies have maximum control over product distribution, collection and overall tank management for a variety of industries including petroleum, propane, chemical, agriculture, pharmaceuticals, food and beverage, and water and wastewater treatment. Developed by Robertshaw Industrial Products, an Invensys company, this leading-edge technology helps companies build profits through the improved operating efficiencies gained from the use of remote tank monitoring. . Headquartered in Maryville, Tennessee, Robertshaw offers combinations of quality products and advanced technology products designed for use across a broad range of industries.
